

So that your machines and systems still get the right power tomorrow.

The advantages BVS has to offer:

- ✓ Full service
- ✓ Functional and load tests
- ✓ Also repairs of discontinued assemblies and series
- ✓ Time-consuming migration to successor products is no longer necessary
- ✓ Certifications of your machines and systems are retained
- ✓ All from a single source - „one face to the customer“

Frequency and compact converters – Everything from one source

In the course of obsolescence and general procurement management for machines and systems, maintenance workers often have to resort to a large number of service providers for the repair and maintenance of control and drive technology.

This is especially true when additional devices from a very wide range of manufacturers are part of the core installed base and are no longer covered by the control/machine manufacturer's support. Otherwise **frequency converters** and **compact converters** have to be repaired and serviced on a frequent basis, which raises the operation's costs for organisation and time.

You can save these costs with us. Because **BVS Industrie-Elektronik GmbH** works with a **range of manufacturers** and covers a broad selection of **CNC, PLC and ROBOT automation**

In addition to the brands in our BVS portfolio, we support:

- Siemens
- Lenze
- Fanuc
- Bosch Rexroth
- SEW-EURODRIVE
- ...

and the most popular manufacturers:

- Danfoss
- Mitsubishi
- KEB
- Getriebebau Nord
- Telemecanique
- Lust
- Hitachi
- Stöber
- Refu
- Moeller
- Allen-Bradley
- Control Techniques
- Berges electronic
- Omron
- Eurotherm
- Vectron

Many others upon request.

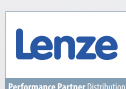

Available for you around the clock

BVS Electronics GmbH
 Repair | Sales | Service
 Electronics for **CNC, PLC & robots** and **renewable energies**
 Margarete-von-Wrangell-Str. 18 · 63457 Hanau

Quality makes the difference.

technology. In keeping with the motto “one face to the customer”.

Send in your module to us and we'll quickly make you an attractive offer for the repair.

We test the function of all frequency converters with a load. In this process, adaptations are made to the module's respective range of tasks and both synchronous and asynchronous motors with magnetic powder brakes are used to create a realistic testing scenario.

You'll receive information about the respective warranty for the modules and function repairs with your offer.

Your benefit:

Our services from one source help you to bundle time and resources and eliminate the need for expensive migration to successor products. Certifications for your machinery and systems will be preserved. In doing so, we don't just optimise your maintenance costs, we also ensure that your machinery and systems get “the right power” on a long-term basis.

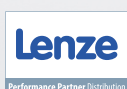

Universal test stand for frequency converters
