

Product reconditioning of CNC, PLC and robot automation technology

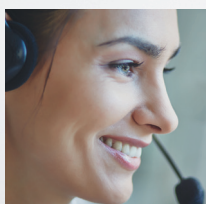

We offer **repair services** for all **manufacturers** encompassing **current** as well as **long-discontinued** and **legacy** systems and assemblies. For us, a **repair** always includes a complete **product overhaul**. This means that we will not just replace the faulty components but, as a **preventive** measure, we will also replace those components that are likely to wear or fail based on the experience we have gained since 1987. Our **DIN EN ISO 9001:2015** and **DIN EN ISO 14001:2015** certification and compliance of our repairs with the **EC Machinery Directive 2006/42/EC** mean

that we can guarantee the long-term quality of the repaired assemblies by only using new and approved **parts** and **components**.

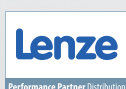

During our **repairs**, we carry out **functional** and **load tests**, including on **original test stands**. And with at least an **24-month warranty** on **repairs** as well as **exchange** and **replacement assemblies**, our **promise of quality** goes far beyond the industry standard.

The advantages BVS has to offer:

- ✓ Repairs based on a thorough product overhaul
- ✓ Washing & cleaning of each assembly before repair
- ✓ Repair & replacement even for discontinued assemblies
- ✓ Preventive replacement of all components subject to ageing or wear
- ✓ Exchange of all components that are identified as weak points and thus constitute a safety risk for the machine and its operators
- ✓ Exclusive use of new and approved components authorised by the manufacturer and legislator
